ZEB Discovery Image Processor

Installation Guide

1) Run the ‘ZebDiscovery.Installers.ImageProcessor.msi´ file provided.

2) A Setup window will appear.

3)

4) Accept the licence agreement and the click on **Install**.

5) You may see a pop-up warning that the application is from an unknown publisher. Select **Yes** if this is the case.

6) When installation is complete, the confirmation screen will be shown. Click on **Finish**.

7) Shortcuts to the software will be created on the desktop and in the Start Menu under 'ZEB Discovery Tools'.

8) Note that a valid Hub licence including ZEB Discovery capability should be activated via Hub before using the image processing software. It is possible to enter calibration and configuration information before the licence is installed but no processing will be possible.

9) On launching the software for the first time, you will be prompted to load the factory default calibration file.

10) Ensure that the USB stick supplied with the system is inserted into the PC and then select **Yes**. A standard file selector will open and automatically select the USB drive. (If the file is in a different location or if you have another removeable drive connected to your PC which is selected, just browse to the correct location.) Select the calibration

file ‘Factory Default.xml’ and click on **Open**. The file will be loaded and the software will launch.

Note that if you do not have the factory default file but know the calibration values, you can select **No** *at the screen shown above and manually enter the values. Be sure to click on* **Save** *when all parameters have been entered.*
